## Introducing NISEI – A fan organization dedicated to continuing Netrunner

• Null Signal Games • June 15, 2018

We're all saddened by the news that FFG will no longer be producing Netrunner. If you think Netrunner is a dead game, though, you're making a grave mistake. It's quite the undertaking, but there are a lot of us that want to carry on. Today, we're going to start a revival, and we'd like you to let the spirit of Jackson fill your heart. Because:

**TODAY, WE ARE CANCELLING THE APOCALYPSE!**

NSG Translation Team | 2025-12-23

The Translation Team is excited to announce that *Elevation* is now available in French, German, Simplified Chinese and Traditional Chinese. All four languages are now available for free to print and play from our web site, or for purchase through Make Playing Cards. Additionally, Italian and Spanish translations of *Elevation* are nearing completion.

Highlight community (open-source) projects  
which helped shape the game and aid its continuation

The background of the slide features a woman's face with a serene expression, surrounded by vibrant, glowing energy fields in shades of green, red, and orange. These fields appear to be composed of intricate, swirling patterns of light, resembling fractals or celestial bodies. The overall atmosphere is mysterious and futuristic.

"Installing 1001 programs puts you in the hacker hall of fame..."  
- Scheherazade's flavor text  
Turns out that's not that hard to achieve 😊  
@cobrabubbles and I decided to play this deck as our eternal runner in our respective teams for the CoS on friday: it went undefeated for the both of us, winning a total of 10 games, before winning 3 more on Sunday in a side event!

**Strategy**  
The main objective of the deck is to assemble the combination of *In the Grove*, *Technical Writer*, *Scheherazade* and *Sadyojata*, having a second deva in hand and ideally some clicks left. Thanks to the recent change in the ruleset, swapping an installed card with an uninstalled one trigger any relevant "when you install" triggers, meaning that swapping a *Sadyojata* now triggers all the other cards in the combo, gaining 29 and putting one more on *Technical Writer*. Since the action of swapping is now credit neutral it can be repeated until there are enough credits on *Tech Writer* to power the deck for the rest of the game.

**Infinite credits**  
A handy prop I made to remind my opponents I was done paying for anything that game

**Setup**  
Thanks to **Kabonesa Wu** we can find some of the combo cards with just a few clicks. For the rest of them however, we need to draw them, and given how fast eternal can be, we have to do

Rotation

This deck is not like other decks. I'm sure you've seen corp decks before that boast about the necessity that you must possess a particularly high degree of bravery in order to properly pilot them. You've seen decks that require a knowledge of "yomi" and "mind games" to be their truly terrifying selves. This is not one of those decks. This deck requires something different: a little thing called *acting*. You heard me right.  
This deck is played in three parts, or acts.

**Act one - The Pledge:** During this part of the game you mostly play things by the book. You mushin some cards, you install some ICE. The runner should not notice anything strange is going on except for maybe seeing a Power Shutdown or a copy of Aggressive Negotiation. They'll probably chuckle to themselves knowingly or chide you for not spending your influence on more worthwhile resources. Sometime during this act you want to score an agenda and use Aggressive negotiation to search for The Board (or Power shutdown if you are missing it). Aggressive negotiation is key here because you don't have to show the card you search for. Once you have a reasonable number of credits (between 4 and 9 is the correct number I think), The Board, and Power shutdown in your hand, and maybe a jackson on the table, it's time to move on to the next act.

**Act two - The Turn:** This act is called The Turn because it is only one turn long. It goes like this. Click 1: Install The Board, maybe behind some ICE, maybe not. The key here is to do it confidently, and believe with all of your heart that you are not installing The Board, but are in fact installing a Jackson Howard. This is crucial. Click 2: Power Shutdown your entire deck. Do it confidently, brazenly even. Act like there is no way that this could ever be a bad idea, because you are about to shuffle some cards back in with that Jackson you just installed, and then you are going to win the game. During the paid ability window between clicks 2

## Remember 2020?

### In-Person 2020 World Championship Cancelled

El Zilcho | 2020-06-09

It is with great regret that we must announce the cancellation of the in-person NISEI 2020 World Championship. It's heartbreaking, but 2020 hasn't left us with much choice in the matter. But don't worry, we will crown a World Champion. More on that below.

“people make wild claims (like deck shuffle rng being off), and I go out of my way to check for correctness” - nbkelly, [jinteki.net](http://jinteki.net) dev

A screenshot of a GitHub code editor interface. The top bar shows the repository path "netrunner / src / cljs / game / core" and the commit hash "5653c24". The main area displays a Clojure code snippet. The code includes comments explaining the use of a defonce macro to generate a random number generator (rng) with 1024 bytes of entropy, noting it's more expensive than 220 bytes but produces 170 card lists. It also references Fisher-Yates shuffle pseudorandom generators and provides a link to Wikipedia. The code then defines a shuffle-coll function using Java's util.Collection interface and java.util.ArrayList to implement the shuffle operation.

```
14
15
16  (defonce rng
17    ;; Note: around 220 bytes of entropy are needed to be able to produce all random
18    ;; combinations of a singleton 49 card list.
19    ;; 1024 bytes allows us to do 170 card lists, and is not much more expensive.
20    ;; see: https://en.wikipedia.org/wiki/Fisher%20%26%20Yates\_shuffle#Pseudorandom\_generators
21  (let [rand (SecureRandom.)
22        seed-bytes (byte-array 128)]
23    (.nextBytes (SecureRandom.) seed-bytes)
24    (.setSeed rand seed-bytes)
25    rand))
26
27  (defn- shuffle-coll
28    ;; Ref: https://github.com/clojure/clojure/blob/ce55092f2b2f5481d25cff6205470c1335760ef6/src/cljs/clojure/core.cljs#L7342
29    ;; we're just substituting in a good rng source (1024 bits of entropy) rather than the default used by java (40 bits of entropy)
30    ;; this should theoretically be invisible, since any random slice of the possible sets of deck orderings is also random,
31    ;; but it is "more correct" to do - anyone playing more than 170 cards can live with it - nbk, 2025
32    [^java.util.Collection c]
33    (let [al (java.util.ArrayList. c)
34          (java.util.Collections/shuffle al rng)
35          (clojure.lang.RT/vector (.toArray al))])
36
```

"people make  
shuffle rng better  
way to check"

## I analyzed shuffling in a million games

[Discussion](#)

**UPDATE 6/17/2020:**

Data gathered after this post shows an abrupt change in distribution precisely when War of the Spark was released on Arena, April 25, 2019. After that Arena update, all of the new data that I've looked at closely matches the expected distributions for a correct shuffle. I am working on a web page to display this data in customizable charts and tables. ETA for that is "Soon™". Sorry for the long delay before coming back to this.

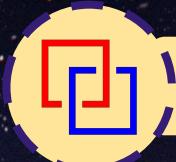

**Original post:**

Back in January, I decided to do something about the lack of data everyone keeps talking about regarding shuffler complaints. I have now done so, with data from over one million games. Literally. Please check my work.

This is going to be a lengthy post, so I'll give an outline first and you can jump to specific sections if you want to.

1. Debunking(?) "Debunking the Evil Shuffler": My issues with the existing study
2. Methodology: How I went about doing this
  1. Recruiting a tracker
  2. Gathering the data
  3. Aggregating the data
  4. Analyzing the data
3. The Results
  1. Initial impressions
  2. Lands in the library
    1. Overall
    2. Breakdown

```
14
15
16 (defonce rng
17   ;; Note: around 220 bytes of entropy are
18   ;; combinations of a singleton 49 card list
19   ;; 1024 bytes allows us to do 170 card lists
20   ;; see: https://en.wikipedia.org/wiki/Fisher-Yates\_shuffle
21   (let [rand (SecureRandom.)
22         seed-bytes (byte-array 128)]
23     (.nextBytes (secureRandom.) seed-bytes)
24     (.setSeed rand seed-bytes)
25     rand))
26
27 (defn- shuffle-coll
28   ;; Ref: https://github.com/clojure/clojure/blob/master/src/jdk/java/util/Collection.java
29   ;; we're just substituting in a good RNG
30   ;; this should theoretically be invisible
31   ;; but it is "more correct" to do - anyone?
32   [^java.util.Collection c]
33   (let [al (java.util.ArrayList. c)]
34     (java.util.Collections/shuffle al rng)
35     (clojure.lang.RT/vector (.toArray al))))

## Single Sided Swiss: How it Works by Ysengrin

1 Guest Author 0 February 17, 2021

This article is a guest contribution by Ysengrin. It is a repost (with permission) from his personal blog. The original article can be found here: <https://netrunnerscribbler.wordpress.com/2021/02/17/single-sided-swiss-how-it-works/>

### Intro

I have created a free application for tournament organizers to run single sided swiss events called the [Side Aware Swiss System \(SASS\)](#) and this article will describe how it pairs. I'm going to cover it first in a hopefully universally understandable way, and then go into a bit more depth of the actual math used for those interested.

### Why Single Sided Swiss?

The very short summary of why I'm looking at single sided swiss for Netrunner tournaments is because the current format, double sided swiss (i.e. a match is two games, one on each side), has some problems.

- The structure makes 241s, ("two for one") where instead of playing both games, the two players agree the winner of the first game gets both wins, very commonly the optimal choice for both players. This occurs when both players would need to get 2 wins to make the cut. But even beyond that, it's often a higher expected value for a player to 241 every round.
- Intentional draws (IDs) are also extremely common. Because both players get a full win recorded, the top score bracket in most tournaments can usually safely ID into the cut playing very few games of Netrunner (this is further exacerbated with byes).
- Those two factors combine to mean early performances in Netrunner tournaments, against the weakest opponents (theoretically) end up having a significant impact on who makes it into the cut and who misses it.
- For new players, to Netrunner or just to a local scene, the etiquette of when you ID/241 can also be intimidating, and adds an extra burden to Netrunner tournaments.
- Finally, because 241's side selections are not tracked, someone could theoretically 241 every round and just get one of their two decks the whole day.

## This Evening's Twitter Rulings

Lukas has once more provided us with some gospel. Here's the summary:

- Installed Cards: The latest FAQ states "Unless otherwise noted, all card abilities that do not specify the state of a card can only affect installed cards." However, this ruling has been interpreted to be much wider in scope than intended and will be revisited in the next FAQ. For example, Rebranding Team affects assets in Archives, and Hostile Infrastructure and Ronald Five deal damage and steal clicks, respectively, even when the runner trashes non-installed cards.
- Film Critic: The runner cannot voluntarily trash the hosted agenda. If a Film Critic is hosting an agenda, it can't host another one until you use its ability to add the hosted agenda to your score pile.
- Casting Call: Casting Call gets trashed whenever the hosting agenda is uninstalled - such as via scoring, stealing, or hosting on Film Critic.
- Media Blitz: Only the text box of the chosen agenda is copied - not the card name or any other quality. So it does not create a combo with Private Security Force, for example.

“[...] the very brief time that saw Glenn Station become the best agenda in Weyland's fiery arsenal [...] Lukas initially issued a confusing ruling [...] This led to the idea that the Corp could do the same with Glenn Station [...]”

Ob Superheavy  
Logistics: Extract.  
Export. Excel.

Identity: Corp  
Deck size: 45 • Influence: 15

Once per turn → When you trash a rezzed card, except during installation, you may search R&D for 1 card with a printed rez cost exactly 18 less than the trashed card's printed rez cost. Install and rez the card you found, ignoring credit costs.

Take all that is offered, and more.  
Illustrated by Vitalii Ostaschenko

## Rulings

• **VERIFIED** Updated 2022-11-20

If the Corp trashes a *Border Control* to end the run and then uses *Ob Superheavy Logistics* to search for an *Anemone*, can they also trigger *Anemone*'s rez ability?

Yes, as long as the *Anemone* is installed protecting the attacked server. The search effect from *Ob Superheavy Logistics* and any resulting chain reactions are resolved immediately after paying the cost of *Border Control*'s ability, before the "End the run" instruction resolves, so the condition on *Anemone*'s ability can still be met.

• **VERIFIED** Updated 2022-11-20

Can the Corp use *Ob Superheavy Logistics* to search R&D for a card when they trash a card with rez cost 0?

Yes, but since there are no cards with a printed rez cost less than 0, they will fail to find any cards and simply shuffle R&D. Note that the ability was still used, even if no card was installed, so it cannot be used again that turn.

• **VERIFIED** Updated 2022-11-20

If the Corp trashes a *Border Control* to end the run and triggers *Ob Superheavy Logistics* to shuffle R&D, does the shuffle happen before or after

## Comprehensive Rules Hub

An intricate game like Netrunner requires a robust and ever-evolving set of rules to support it. As new sets are released, the Null Signal Games Rules team carefully updates the Comprehensive Rules to support the new expansions, and issues card text updates so that previously printed cards are in line with the latest rules.

On this page, you'll find the Netrunner Comprehensive Rules and card text updates. If you're new to the game, don't start here — check out the [Learn to Play](#) guide instead.

## Netrunner Comprehensive Rules

### Null Signal Games

This rules document is to be used as reference material. It is not intended to be read straight through. If you still have questions after consulting this document, please ask us online via [email](#). This version of the Comprehensive Rules document is effective **01 August 2025**.

#### [▶ Summary of Changes \(v25.08\)](#)

#### [▶ Acknowledgements](#)

## 1. Game Concepts

### 1.1. General

*These rules are compatible with cards from the game ANDROID: NETRUNNER by Fantasy Flight Games. ANDROID: NETRUNNER is a game about the cyber-struggle between massive Corporations and subversive hackers known as Runners.*

- 1.1.1. The game is played between two players. One player takes the role of the Corp (Corporation) and the other takes the role of the Runner. This rules document will frequently refer to a player interchangeably with their game role.
- 1.1.2. Each player needs a legal deck, an identity card for their role, and any extra cards used from outside their deck. They also need a supply of tokens as described in [section 1.9](#). The constraints that define the legality of a deck are defined in [section 1.4](#), and the cases where cards outside the deck and identity can be used are defined in [section 1.5](#).
- 1.1.3. All numbers used in the game are integers. Unless otherwise stated, a given value can be positive, negative, or zero.

### 1.2. Golden Rules

- 1.2.1. If the text of a card directly contradicts these rules, the text of the card takes precedence.
- 1.2.2. If a rule or ability directs something to happen, but another effect states that it cannot happen, the "cannot" ability takes precedence.
- 1.2.3. If an instruction includes the words "if able," it can only be carried out fully or not at all. If any part of the instruction is not possible to carry out, the entire instruction is ignored.
- 1.2.4. If an instruction does not include the words "if able," as much of that instruction as possible is carried out. Any parts of the instruction that are not possible to carry out are ignored.
